Description

Hydraulic toe jacks provide a practical solution for lifting heavy machinery, equipment and other loads where access underneath the load is limited. The low-profile lifting toe allows loads such as containers and large industrial equipment to be raised with minimal clearance.

The compact design allows the jack housing to rotate through **360 degrees**, making the jack easier to position in confined or awkward areas. Lowering speed can also be accurately controlled for safer load positioning.

Features

- Available in **5T and 10T capacities**
- Low-profile lifting toe for lifting loads with limited underside clearance
- **360-degree rotating housing** allows flexible positioning
- Adjustable lowering speed for controlled lowering
- Built-in overload protection
- Removable pump lever
- Compact and stable design
- Suitable for lifting containers, machinery and large industrial equipment
- Manufactured to **CE / US standards**
- Meets **ASME ANSI B30.1.1986**

Not suitable for use with vehicles.

Specifications

Models	HM50	HM100
Capacity	5000kg / 5T	10,000kg / 10T
Lift Range – Foot	25–230mm	30–260mm
Lift Range – Head	368–573mm	420–650mm
Maximum Lever Force	38kg	40kg
Net Weight	25kg	35kg
